

ACKNOWLEDGMENTS

The author acknowledges and greatly appreciates all of the assistance and guidance provided by his thesis advisor, Dr. D. Kalluri. Dr. Kalluri encouraged the author to pursue this work and contributed a large amount of his time to the development and preparation of this thesis.

The author thanks Andrew Sessler of the Lawrence Berkeley Laboratory and Jonathan Wurtele of the Massachusetts Institute of Technology for their helpful comments.

The author is thankful to his wife, Laura, for her continued support and encouragement during his graduate studies and preparation of this thesis.
